

Liquid ring compressors

KPH 85220, KPH 85227

Compression pressures: 2 to 7 bar
Suction volume flow: 940 to 1450 m³/h

CONSTRUCTION TYPE

Sterling SIHI liquid ring compressors are displacement compressors of simple and robust construction having following special characteristics:

- Pumping of nearly all gases and vapours
- non polluting due to a nearly isothermal compression
- oil-free, as no lubrication in the working chamber
- additional liquid can be handled with the gas flow
- easy maintenance and reliable operation
- low noise and nearly free from vibration
- wide choice of material, therefore applicable nearly anywhere
- incorporated central drain
- no metallic contact of the rotating parts

The Sterling SIHI liquid ring compressors KPH 85000 are two stage compressors, with double acting second stage.

APPLICATION

Every application where pumping gas has to be compressed carefully to a pressure of abt. 6,5 bar and only a small increase in temperature is admissible;
 e.g. recovery of solvent or vinyl chloride vapour.

NOTE

During the operation the compressor must continuously be supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compression and to replenish the liquid ring, because part of the liquid is leaving the pump together with the gas. This liquid can be separated from the gas in a pressure liquid separator.

It is possible to reuse the service liquid.

The direction of rotation is clockwise when looking from the drive on the pump.

GENERAL TECHNICAL DATA

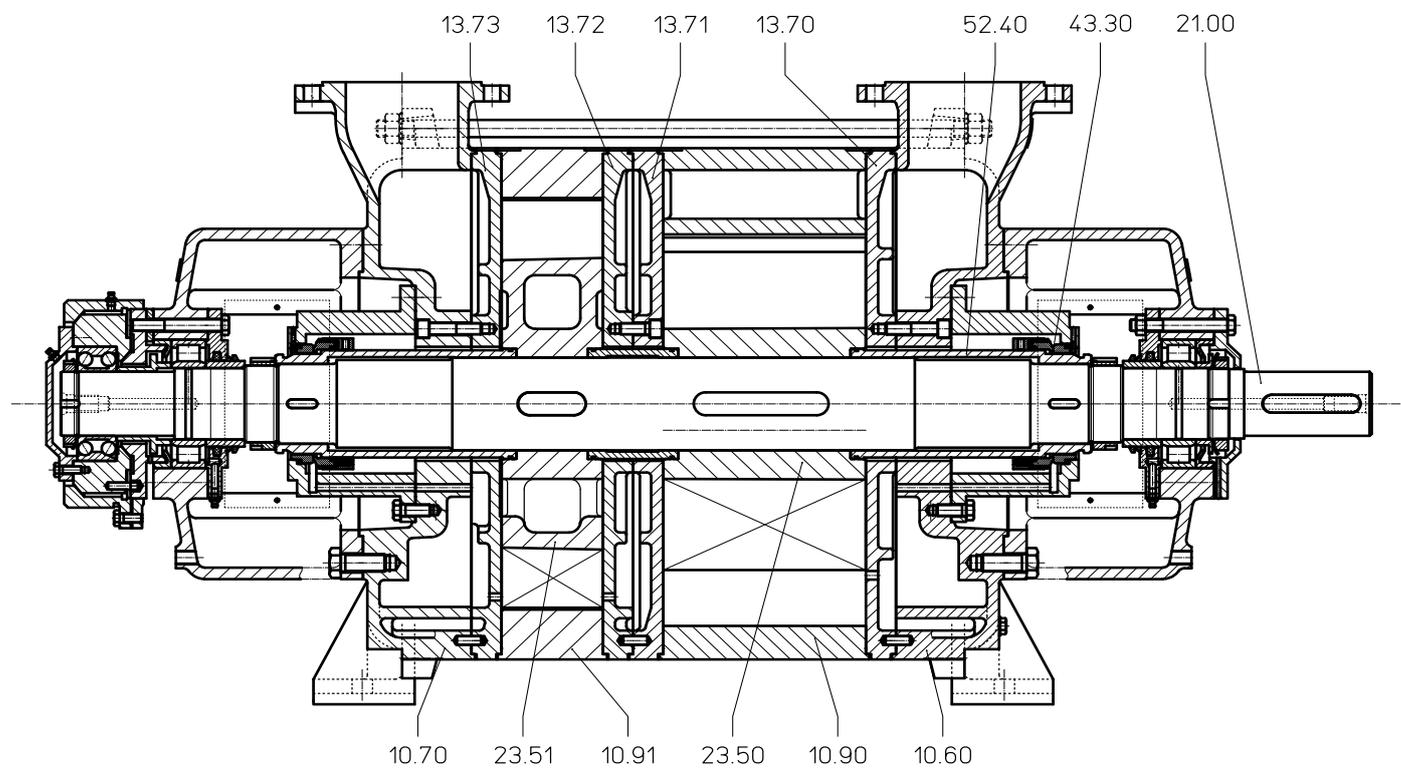

Pump type		unit	KPH 85220	KPH 85227
Speed	50 Hz	rpm	985	
	60 Hz		1180	
Max. compression over pressure		bar	7	
Hydraulic test (over pressure)		bar	10,5	
Moment of inertial of the rotating pump parts and of the water filling		kg · m ²	6,25	8
Sound pressure level of measuring area		dB (A)	77...80	
Min. pulley diameter permissible in case of V-belt drive	50 Hz	mm	1000	1000
	60 Hz		1000	1200
Max. gas temperature		°C	100	
Service liquid	max. admissible temperature	°C	80	
	max. viscosity	mm ² /s	90	
	max. density	kg/m ³	1200	
	volume up to shaft level	liter	64	73

The combination of several limiting values is not admissible.

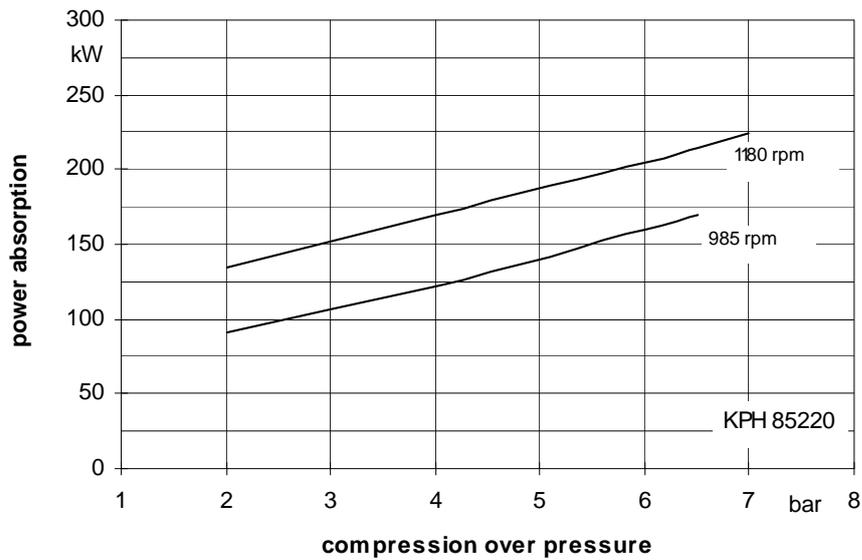

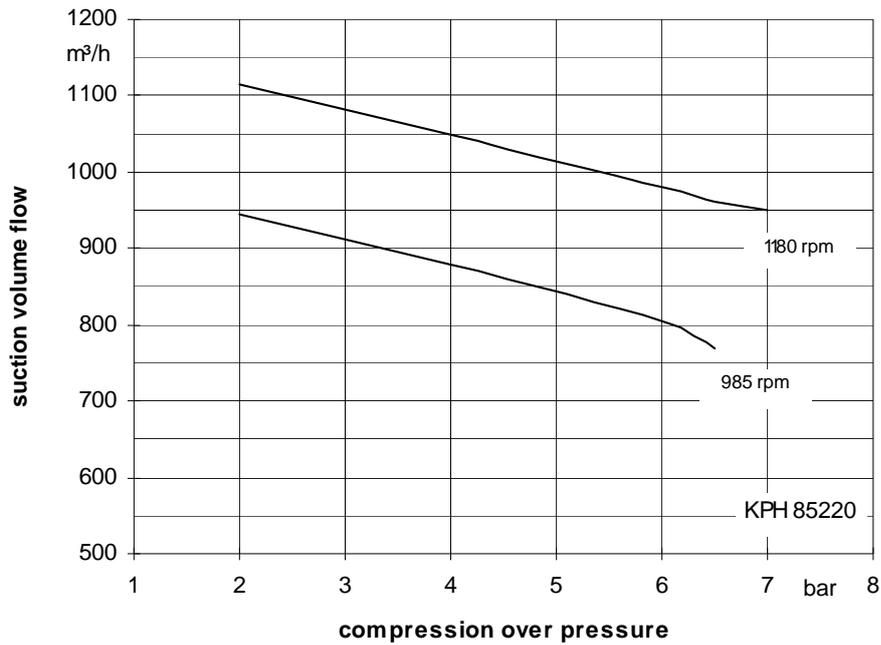

Material design

Item	COMPONENTS	MATERIAL DESIGN	
		1G	4B
10.60 / 10.70	Casing	0.7043	1.4408
13.70 / 1371 13.72 / 13.73	Guide disk	0.7043	1.4408
23.50 / 23.51	Vane wheel impeller	0.7043	1.4517
10.90 / 10.91	Central body	0.7043	1.4408
21.00	Shaft	1.0503	
52.40	Shaft sleeve	1.4301	1.4571
43.30	Mechanical seal	Cr-steel / carbon / Viton	Cr Ni Mo-steel / carbon / Viton

Sectional drawing KPH 85220, KPH 85227

Suction volume flow and power absorption KPH 85220

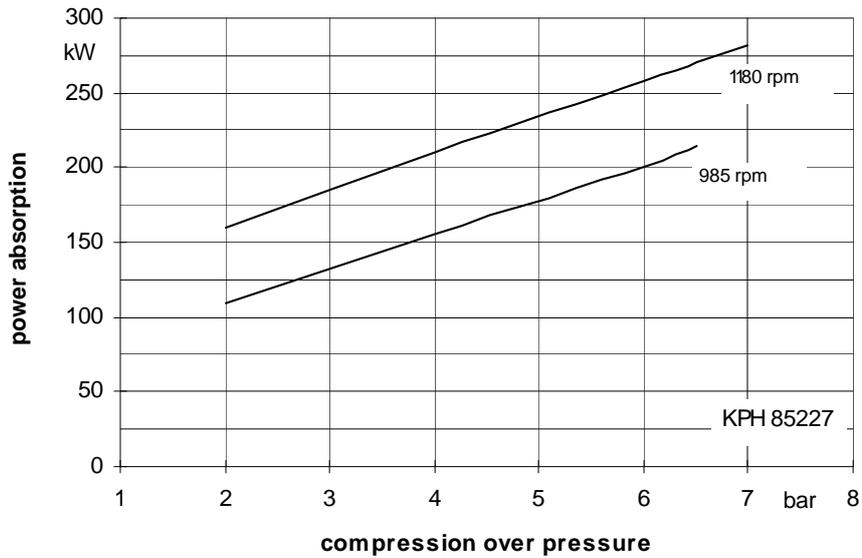

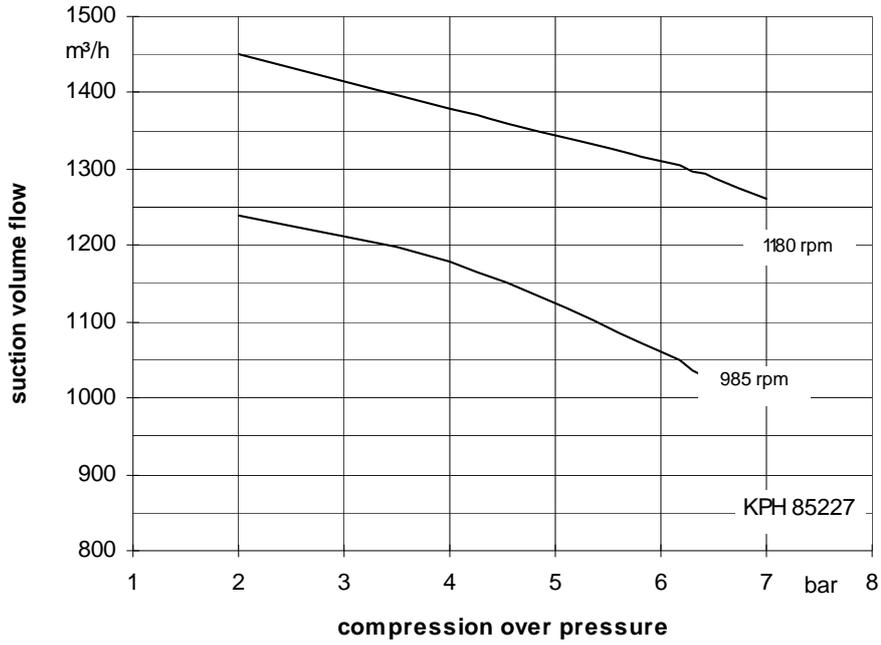

The values indicated for volume and power absorption are valid for compression of dry air at 20°C from atmospheric pressure (1013 mbar) of the respective compression pressure with water at 20°C as service liquid. Tolerance of the curve values is 10%. The compression pressure in bar is indicated as pressure above the atmospheric pressure.

The data indicated change with deviating service conditions, such as deviating physical data of the gas to be handled or of the service liquid (vapour pressure, temperature, density, viscosity) when handling entrained liquid, at a suction pressure deviating from atmospheric pressure handling gas-vapours mixtures.

For determination of service data for deviating service conditions please see catalogue section TH.

Suction volume flow and power absorption KPH 85227

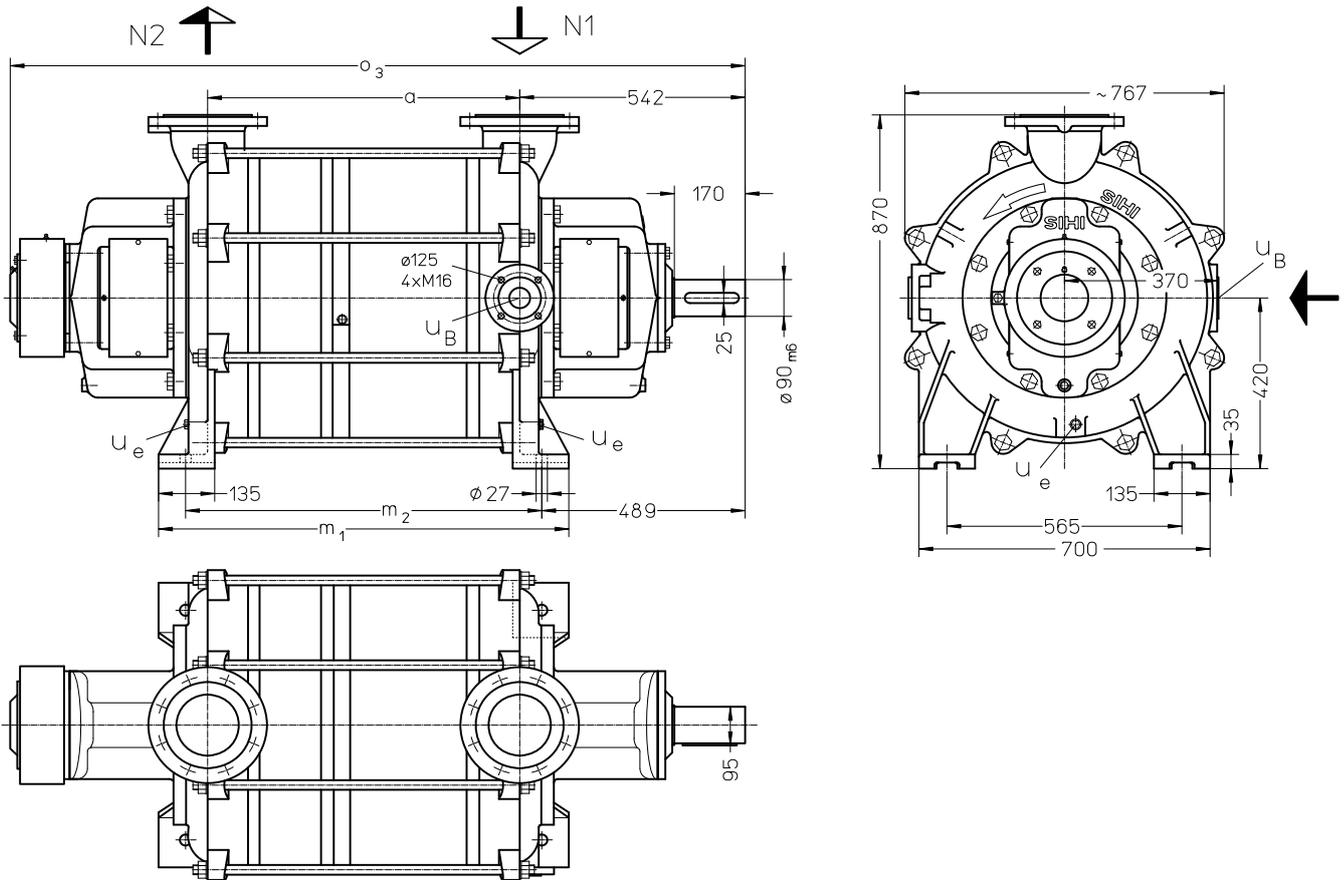

The values indicated for volume and power absorption are valid for compression of dry air at 20°C from atmospheric pressure (1013 mbar) of the respective compression pressure with water at 20°C as service liquid. Tolerance of the curve values is 10%. The compression pressure in bar is indicated as pressure above the atmospheric pressure.

The data indicated change with deviating service conditions, such as deviating physical data of the gas to be handled or of the service liquid (vapour pressure, temperature, density, viscosity) when handling entrained liquid, at a suction pressure deviating from atmospheric pressure handling gas-vapours mixtures.

For determination of service data for deviating service conditions please see catalogue section TH.
