Ball valve AT 3716-

Product information

High valve neck, full flow, PN 16, smooth ends for press fittings and steel handle. Ball valve made of dezincification-resistant lead-free brass (less than 0.1%). Graphite packing. For hot and cold tap water, heating and cooling systems, air and neutral gases.

Dimension range (DN)	10 - 50
PN	16
Temperature (°C)	0 - 150
Main material	Brass

Area of use

Shut-off valve intended for installation in piping systems made of galvanized steel, copper or stainless steel, where press fittings are used. Suitable for hot and cold tap water, heating and cooling systems, -30°C to +110°C, PN 16. For air, neutral gases and flammable liquids, maximum operating pressure PN 16. Silicone-free.

Suitable for water from 0°C to 150°C.
Suitable for air from -10°C to 150°C.
Can be used down to -30°C in cooling systems with glycol-based media.

Tender text

PSB.1 Ball valves
Viridi ball valve AT 3716 in dezincification-resistant lead-free brass (lead content below 0.1%). With full flow, smooth ends for connection of press fittings, cast high spindle neck and steel handle. PN 16. Graphite packing and PTFE-coated ball. Viridi ball valve AT 3716 is approved for installation where requirements from the Building Assessment and Healthy House have been set.

Quality assurance

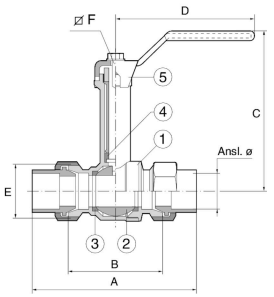

AFS 2023:5, 8 paragraf
The Viridivent valves may be used for liquids and gases in group 2 according to AFS 2016:1. The Viridivent valves are covered by AFS 2016:1, 8§, the directive for pressure equipment (PED 3.3) and therefore may not be CE

marked. The Viridi range is made of alloys that are covered by the "4MS Common Composition List" which includes materials and products approved for use in contact with drinking water.
Product marking: Brand, PN and DN.

Energy and environment declaration

Product Bvb: Avoided
Product BVB ID: 116295
Subject to notification under REACH: No
Reach date: 12/06/2026

Measurements and weight

Dimension range (DN): 10 - 50

DN	10	15	20	25	32	40	50
A	138	140	150	170	186	214	246
B	50	55	60	70	80	90	100
C	96	98	101	110	120	132	140
D	90	90	90	125	125	160	160
Net weight (kg)	0.437	0.437	0.67	1.057	1.52	2.35	3.6

Function and design

3716 has a construction length according to SS 1129 in dimensions 12-54. The connection ends have cone/sphere coupling according to SMS 3269.
AT 3716 has a high spindle neck. Suitable for installation where the valve needs to be over-insulated.
AT 3716 DN 40 and DN 50 are equipped with a regular handle. If a slow-closing handle is desired, use AT 3716V42 or AT 3716V54. The valves have full flow-through and are equipped with a re-tightenable packing box.

Technical data

Main material: Brass
Main material code: Brass (CuZn38As) (CW511L, Pb<0,1%)
Included materials: Brass, Steel, Other
Included material code: Brass (CuZn38As) (CW511L, Pb<0,1%), PTFE (polytetrafluoroethylene)
Temperature (°C): 0 - 150

Temperature notes: PN40 for ≤DN50 (Max 40bar up to +95°C, max 25bar at +150°C) PN25 for ≥DN65 (Max 25bar up to +95°C, max 16bar at +150°C). Suitable for water from 0°C to 150°C. Suitable for air from -10°C to 150°C. Can be used down to -30°C in cooling systems with glycol-based media.
PN: 16
Connection: Press coupling
ETIM classification: EC011343 - Ball valve
BK04 code: 20702 Ball valves
Comment to colour: Natural colour, untreated.

Installation and maintenance

Flowdirection: Bi-directional
Possible mounting position: Vertical, Horizontal
The threads and sealing surfaces on the valve should be lubricated with paste to facilitate assembly. Remember to use the pipe wrench as a wrench, so that the coupling nut does not get squeezed and thereby jammed. Never clamp the valve body with a pipe wrench or vice. When fixing the valve, always use existing counterforce. Retightening of the packing box may be necessary for air and gas systems when the test pressure exceeds 6 bar. For optimal function, the valve should be operated at least 2 times per year.

The company's management system
is certified by Kiwa
ISO 9001 • ISO 14001
