DESCRIPTION

- **Multifunction.** With 4 possible connection ends, virtually any desired flow direction is achievable. The standard version comes with 3 connection ends - see flow plans on page 2.
- **4 seat rings** settle the ball on all sides, which allows input flow in all connection ends without the occurrence of bypass (leak) behind the ball.
- **Service-proven.** The four connection ends are easily removed for replacement of the valve seats during maintenance.
- **Traceability on all valves.** On request material certificate EN10204/3.1 can be delivered with the valve.
- **ISO 5211 mounting flange** for direct mounting of actuator without the use of coupling and bracket. This compact unit gives fewer transitions = less "slack".
- **'Fugitive emissions' packing system** according to ISO EN 15484-1, with spring washers, V-rings and O-ring allows for optimal tightness - both at varying temperature and over time when the packing wears out.
- **Stainless steel weld ends - ISO 1127** is standard.
